

We at **Christ Church Junior School** are aware that keeping our children hydrated will aid them to perform at their very best throughout the school day.

As a result, we decided to invest in watercoolers from AquAid. Our unique relationship with AquAid has also given our school the opportunity to help those less fortunate than ourselves.

Our decision to install a water cooler from AquAid means that for each machine that we have, we have donated £20 per year per cooler to The Africa Trust.

Through our contributions to The Africa Trust, an 'Elephant Pump' is being installed in Africa on our behalf.

This pump will bring much needed, clean, fresh drinking water and improve the quality of life of those who will have access to our well.

Our school's name will be displayed proudly on our well and we look forward to adding some photos and letters of thanks from the villages to our site in the near future.
